AT3 Report & Design Documentation

Assessment 2 Feedback

In the new version of the website, I made changes based on the feedback received from assessment task 2. I changed the structure of the horizontal navigation bars using unordered lists elements and list item elements for each link. I added an email link and a phone link (fake phone number for privacy) to the footer of each web page. I used ID selectors for some elements to apply CSS rules. Finally, I used more character references in the footer of each web page to achieve the copy right symbol.

Copyright © Ryan Kirkland. All Rights Reserved. Contact Me: Email: kryan8574@gmail.com Phone: 04XXXXXXXX (fake number)

In the CSS portfolio file, I changed the font family property of the whole website to have a four-typeface font stack. I changed the font weight properties of each header element used in the website to include more font weights. Finally, I added text decoration to multiple elements in the website.

```
h1 { font-weight: 800; }
h2 { font-weight: 700; }
h3 {
  font-weight: 600;
  text-decoration: underline dotted  green;
}
```

```
li a {
  text-decoration: underline solid  green;
}
```

```
.logo-cap {
  text-decoration: underline dashed;
  font-weight: bold;
}
```

Additionally, I changed the names of the directories in the assessment website folder to all lowercase letters to fit the feedback given for assessment task 2. I also deleted the old index HTML and old portfolio CSS files to get rid of conflicting CSS rules and clean up the website.

New Content

Assessment Task 3 Requirements

When I changed my navigation bars to horizontal unordered lists, I used CSS to style the buttons with rounded edges and different background and text colors to differentiate them from surrounding elements in the pages. In addition to changing the navigation bars, I added a navigation bar to each page to allow navigation from any page to any other page in the website.

In the external CSS sheet, I added unique rules for when the page is being printed. These rules will hide the navigation bar and footer to clean up the printed page. The background color was changed to white to reduce ink usage when printing. Font sizes were increased to make content easier to read on a printed page.

On each web page, I added link elements in the heads to add icons to the tabs of the pages when viewed in a browser.

In the footer of each web page, I added a phone and email link. Additionally, I added copyright notices to state that I am the copyright holder of the content on each page.

In the resume page, I added a new item in the ordered list dedicated to my professional and academic experiences. In the new item, I created a table detailing subjects I have completed so far in my bachelor's degree using the table elements.

Additional Content

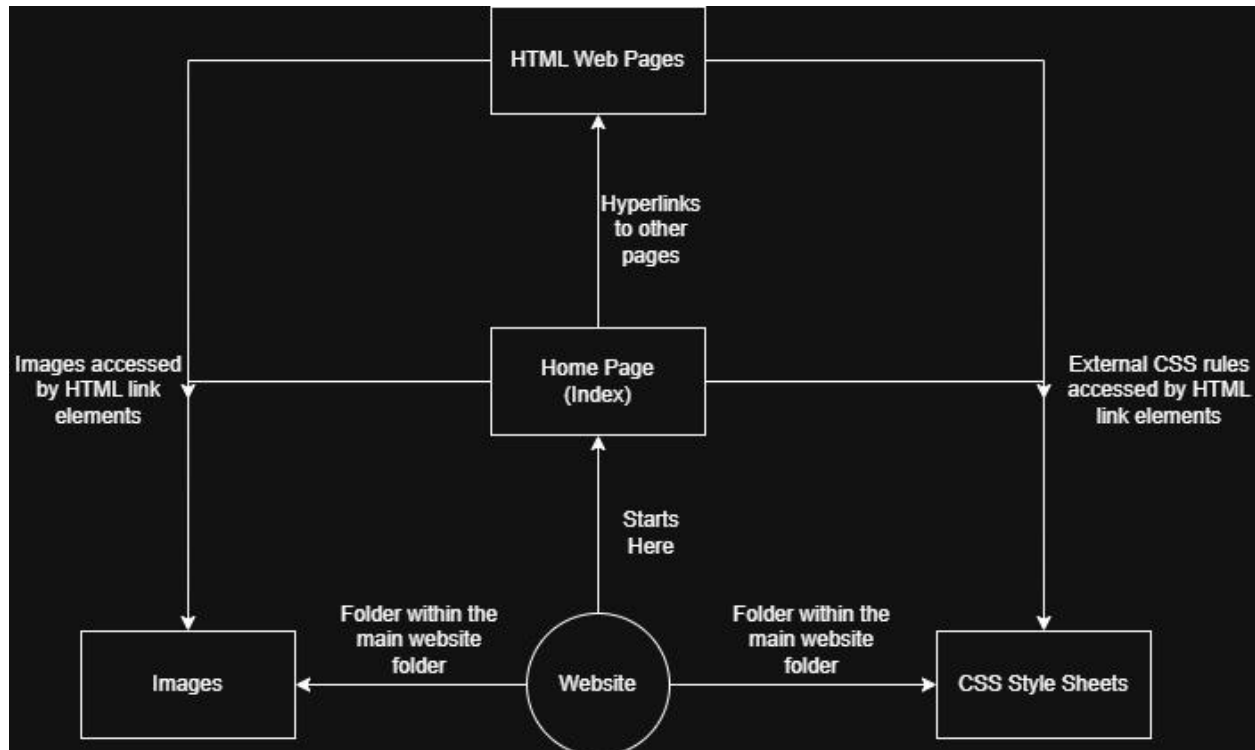

When changing the navigation elements to horizontal navigation bars, I replaced the unordered list of links in the index page with more content. This new content provides more detailed descriptions of each page in the website.

All the anchor (<a>) elements have been changed to have no text decoration until the mouse is hovering over the element. This was achieved by using an 'a:hover' rule to apply an underline text decoration only while hovering over the anchor element.

On the about page, I added a copy of the image of myself from the index page. I did this to fill up the 'about' page and make the page look better.

On the resume page, a sidebar has been added to the left of the page. This sidebar replaced the old navigation bar that was used to navigate to the different sections of the resume page. The new sidebar uses the CSS rules: “position: sticky” and “top: 25%” to remain roughly in the center left of the screen when scrolling down the page.

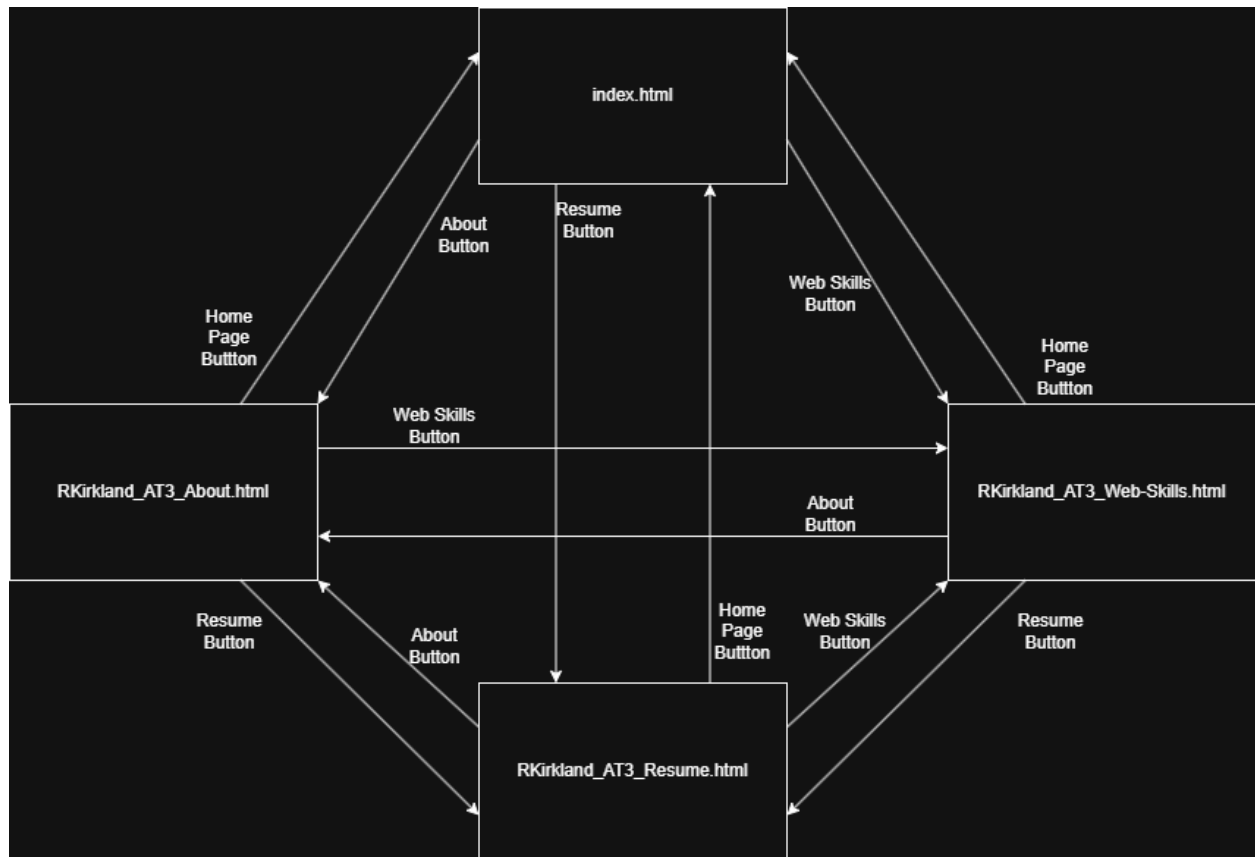

Concept Map

The concept map is the same as the concept map for assessment task 2. Nothing has changed about the general structure or concept of the website, only the content has changed.

The map shows the general concepts of the website, starting with the main 'assessment-website' directory. This main directory connects to each file and then shows how each section of the website is connected.

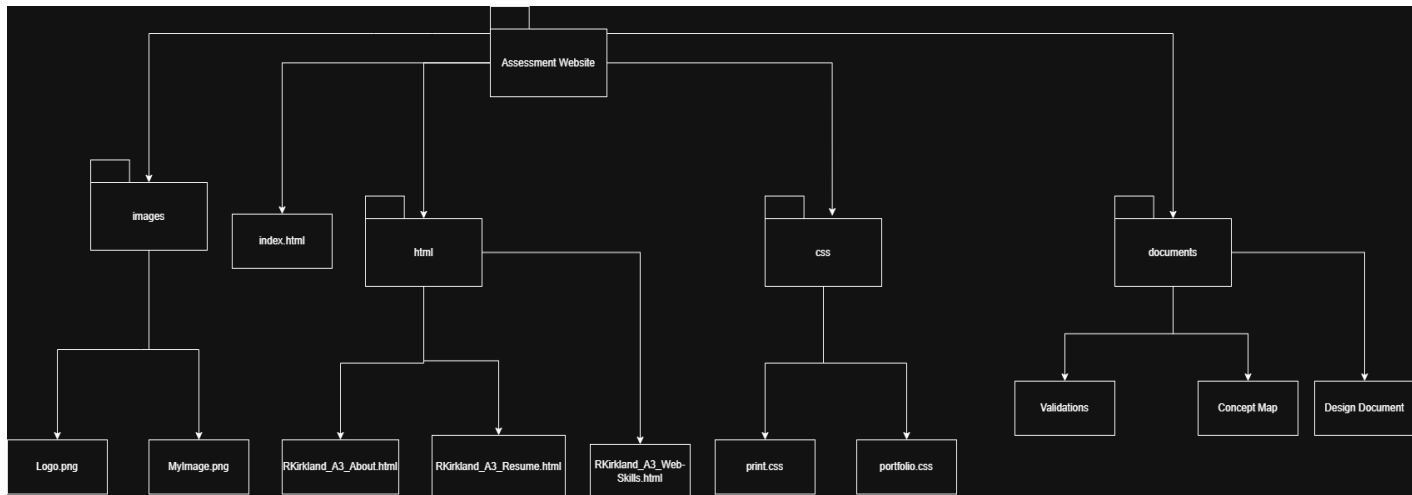

Navigation

This diagram shows the logical navigation of the website; it shows each web page being able to navigate to any other page in the website through buttons. Inside the HTML of the website, this navigation is performed by the horizontal navigation bars made up of unordered list, list item and anchor elements.

Structure

Structure Chart

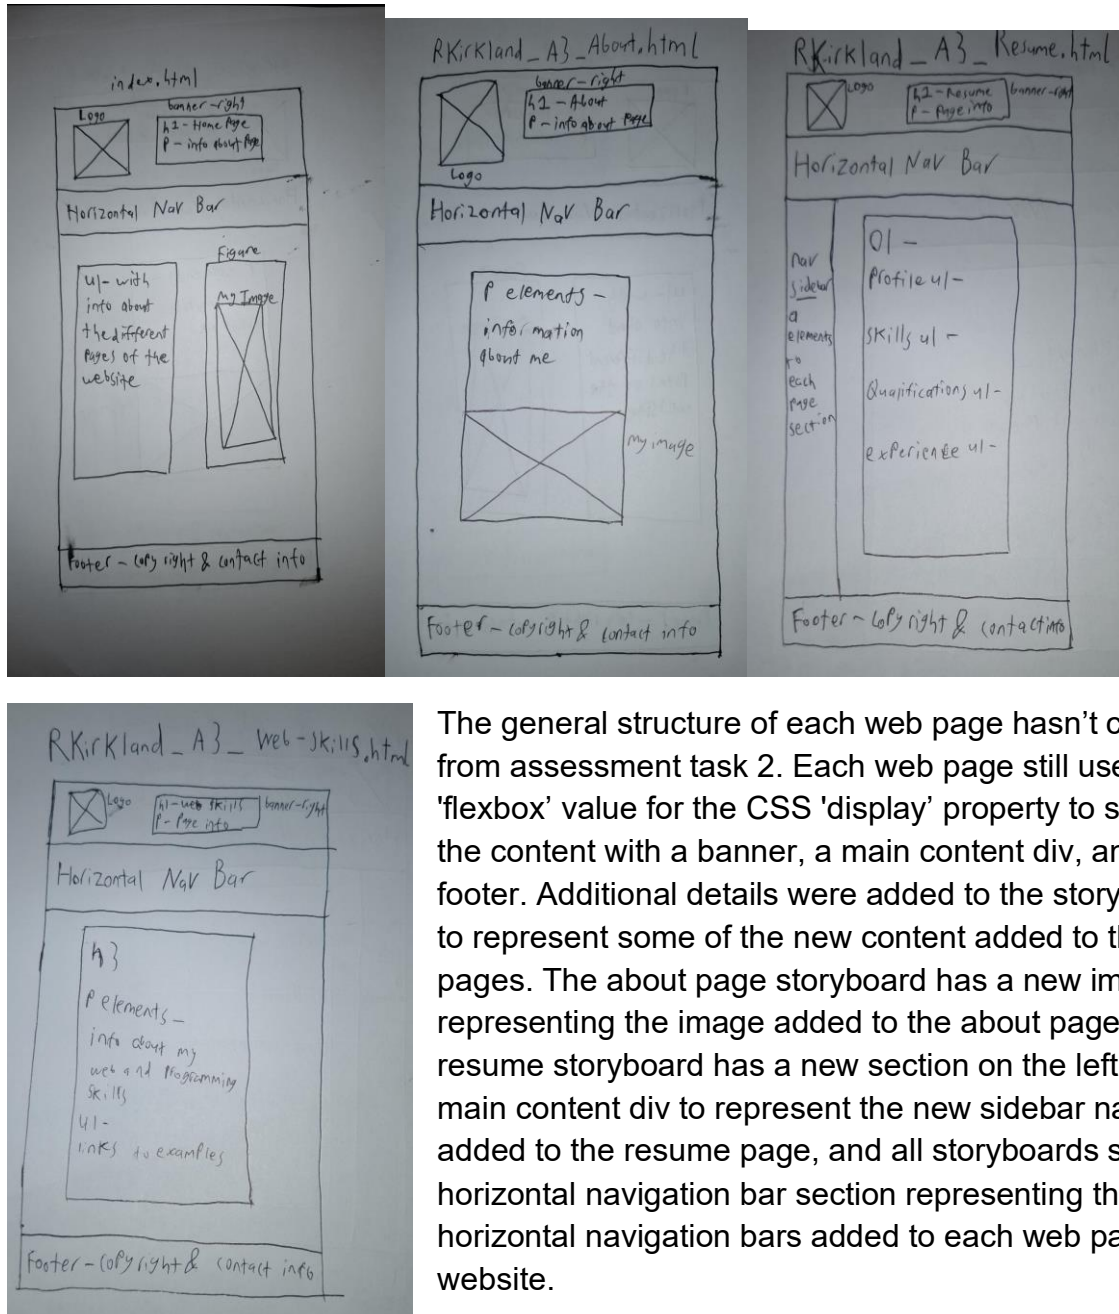

This diagram shows the physical structure of all the directories and files within the website. The root of the website is the “Assessment-Website” directory and contains all subdirectories (images, html, css, documents).

The home page or ‘index.html’ file is kept as a direct child of the root instead of a child of the ‘html’ directory. This ensures that the home page will be loaded when requesting the website's root directory using a URL.

The diagram shows the paths within the website that each file must take to access the other files in the website. For example, for the ‘RKirkland_A3_About.html’ file to access the ‘MyImage.png’ file, it must take a path outside of the ‘html’ directory back to the root directory (../) and then into the ‘images’ directory (images/) to access the image (MyImage.png), the final path will read as: ‘../images/MyImage.png’. For the ‘index.html’ file to access the same image, it will not need to take a path out of its directory since it is kept in the same directory as the ‘images’ directory meaning the path to the same file from the home page file will read as: ‘images/MyImage.png’, dropping the ‘../’ that is needed to go to the file’s parent directory.

Storyboards

The general structure of each web page hasn't changed from assessment task 2. Each web page still uses the 'flexbox' value for the CSS 'display' property to structure the content with a banner, a main content div, and a footer. Additional details were added to the storyboards to represent some of the new content added to the pages. The about page storyboard has a new image box representing the image added to the about page, the resume storyboard has a new section on the left of the main content div to represent the new sidebar navigation added to the resume page, and all storyboards show a horizontal navigation bar section representing the horizontal navigation bars added to each web page in the website.

Testing Plan

1. Starting from the index.html home page
2. Check content appears correctly
 - a. Are CSS rules properly applied?
 - b. Text formatted correctly?
 - c. Images appear?
 - d. Icon appears in tab?
3. Test each button in the horizontal navigation bar
 - a. Does the button navigate to a new page properly?
 - b. Is this new page the same as the page the button is labeled as?
4. Test if the print styles work
 - a. Ctrl + p, are the print styles applied?
5. Test if footer links work?
 - a. Email link
 - b. Phone link (the number is fake, but it should still function)
6. Repeat steps 2 to 5 for all other pages
 - a. About page
 - b. Resume page
 - c. Web Skills page
7. On the resume page, test the new sidebar
 - a. Is the new sidebar correctly aligned to the left of the page?
 - b. Does the sidebar navigation box stay in place when scrolling down the page?
 - c. Does the sidebar obstruct the other content?
 - d. Do the links work?
8. Test the external links on the Web Skills page
 - a. Do they work?
 - b. Do they direct you to the correct page?
 - c. Do they open a new tab instead of using the existing tab?

Personal Reflection

While completing assessment task 3, I learnt many different web development techniques and features that helped me develop my development skills and improve my assessment 2 website.

I practiced how to use the 'table' elements to construct a grid using HTML in the resume web page. I learned how to apply icons to a web page's tab in a browser by using a 'link' element with the 'rel="icon"' attribute. I learned how to apply different CSS rules when printing a page using the "@media print" CSS selector. I practiced using 'unordered list' elements instead of just using the 'nav' elements to improve the horizontal navigation bars in my website and using CSS rules to make the navigation buttons look better and more modern.

Additionally, I made improvements to the website based on feedback from assignment 2. I improved the horizontal navigation bar by using unordered lists instead of just a blank 'nav' element. I deleted the old index HTML and old portfolio CSS files to improve the website organisation and remove conflicting CSS rules. I added some features I didn't include in my assessment 2 website including a phone link, character references, ID selectors, and more text decorations.

Progress Table

Task	Completed?
Use external CSS to format your website	Completed
Modify your CSS so that your navigation bar uses CSS buttons	Completed
Use CSS to enable your HTML to be print friendly	Completed
Your pages must have an identical navigation bar on each page	Completed
Your pages must have a logo	Completed
Your new last home page must have your contact details and a notice stating that you have permission to use or that you are the copyright holder of all content on your site.	Completed
Modify your last resume page to contain a table	Completed
